

Robert-Marian Prisacariu

Junior Software Engineer · AI & Automation

Applied Computer Science graduate (AI specialisation) who has shipped real tools: a grounded AI chatbot and an Excel automation app during a Deloitte internship, plus an open-source AI desktop app of my own. I learn fast, write things down, and like solving practical problems end to end.

EXPERIENCE

Technology & Transformation Intern

Feb 2026 – May 2026

Deloitte Belgium

- Built a grounded AI chatbot for a WordPress site using Azure Functions and Azure AI Foundry, with HMAC request signing, rate limiting, source display and streamed answers.
- Created **IBM ELP Helper**, a Python desktop tool that turns IBM licensing exports into finished Excel workbooks while keeping the consultants' templates intact, packaged as a Windows app.
- Contributed to an ILMT/EERM dashboard in .NET, EF Core and SQL Server (migrations, scheduled imports, role-based permissions) and helped fix Power BI authentication issues.
- Wrote technical documentation and handover material for stakeholders.

"Outstanding problem-solving skills... able to push through uncertain, unclear situations." — Senior Manager, Deloitte (recommendation letter available)

SELECTED PROJECTS

OpenBot

React · TypeScript · Electron · Node.js

Open-source Mac app of AI teammates that work in their own browser, using the user's existing subscriptions or local models. github.com/PrisacariuRobert/openbot

AuraShell

Rust · Tauri · React

AI desktop terminal that turns plain-English requests into safer shell commands using the Gemini API.

ML Production System

Python · Docker · Go · Flask

Team project serving housing-price and electricity-demand models as containerised microservices on a cloud VM (R^2 0.68 and 0.99).

EDUCATION

Professional Bachelor, Applied Computer Science (AI)

2023 – 2026

Thomas More University of Applied Sciences, Geel · taught in English

Erasmus exchange, master-level courses

2025 – 2026

University of Padova, Italy

Dutch · Developing

CORE SKILLS

Languages

Python, TypeScript / JavaScript, C#,
Java, SQL

Backend & APIs

Node.js, FastAPI, Flask, REST,
.NET, EF Core, SQL Server

AI

LLM APIs, Azure AI Foundry,
grounded chatbots, local model
inference

Cloud & tools

Azure Functions, Docker, Git, Azure
DevOps

Frontend

React, WordPress, HTML / CSS

Automation

Python, Excel (openpyxl), Power BI
exposure

WORKING STYLE

Turns unclear requirements into working tools, documents what I build, and keeps going when access or requirements are messy.

AVAILABILITY

Belgium-based. EU citizen, no sponsorship needed. Open to remote, hybrid, full-time or part-time.
